FOR IMMEDIATE RELEASE

## Airtex Launches New Online Technical Resources for Fuel System Repair

Fairfield, IL – (16 February, 2009): Airtex Fuel Pumps announces the free Fuel Delivery Systems Information (FDSI) online resource. Vehicle and application-specific information available includes:

- Fuel pressure specifications
- Labor times
- Technical service bulletins
- Wiring and component locations

In partnership with *Motor Information Systems* and *ShowMeTheParts.com*, the Airtex FDSI site enables quick lookup of critical information required for successful fuel pump repair and replacement. Designed to meet the needs of professional technicians as well as DIY repairers, the online resource is a one-stop shop for fuel system diagnostic and repair specifications.

*"ShowMeTheParts.com* was a key partner in integrating the *Motor Information Systems* data with Airtex's online catalog capabilities," says Dan Williford, Airtex marketing manager. "Airtex relies on *ShowMeTheParts.com* to deliver accurate cataloging as well as integration services because of their technical capabilities and responsiveness."

The new FDSI site can be accessed via the [www.airtexproducts.com](http://www.airtexproducts.com) home page or by clicking on the "technical resources" or "catalog" links.

-----
